

Case study by Dr. Alvin De Leon

CASE: 24

DATE: November 2010

CLIENT: 11 year old right-handed female

Subjective Complaint: The client presented with no complaints on this visit but wanted a GNM explanation about a stomach flu outbreak at her school after the Halloween Dance. She reported that she had **diarrhea, vomiting and a fever** two weeks ago and that several children in her school presented with similar symptoms which all began the day after the Halloween dance. She reports that they were told there was a stomach flu outbreak in the school which may have originated at the dance. However, she did not attend the Halloween dance but was ill with symptoms for about one week.

Organs Affected: Stomach (small curvature)

Embryonic germ layer: ectoderm

Brain control center: cerebral cortex (right temporal lobe)

Organs Affected: Small Intestine

Embryonic germ layer: endoderm

Brain control center: brainstem

GNM Explanation: Stomach (small curvature): territorial anger conflict; ulcerative widening of the small curvature of the stomach during **Conflict-Active Phase** with pain; during the **Healing Phase**, an upset stomach and vomiting attacks. **Small intestine: indigestible morsel conflict** with cell proliferation during the **Conflict-Active Phase** (no pain); with the resolution of the conflict the additional cells are removed, causing diarrhea during the **Healing Phase**.

GNM Understanding: The client understood the explanation and recognized that both the territorial anger and the “indigestible morsel” related to her school-territory and to a new principal whom she claims “nobody likes because he is mean and has too many new rules”. She indicates that new rules were passed regarding the Halloween dance (**her DHS**) which included the dance only being open to those in Grade 7 and 8. She reports that in the past the dance was open to the whole school. She also stated that those attending the dance had to pay \$2 admission which they never did before and that there were many restrictions implemented regarding the type of costumes they were allowed to wear. Therefore it is evident that those children in the school who were upset by the “new rules” regarding the Halloween dance would have been in the Conflict Active Phase leading up to the day of the dance. After the dance was finished, they ALL entered the Healing Phase and hence the symptoms (“flu outbreak”) on the weekend after the Friday night dance. It was important for the client to understand the conflict that had led to her symptoms in order to avoid any tracks, that is recurring stomach flu relapses in association with the new principal.
